Submitted articles go through BIOJ’s peer review process. Any reviewer feedback suggesting revisions is passed back to the author so these can be made at this stage. Further rounds of review are undertaken as necessary. The time needed for this process will vary.

The article text will be reviewed for consistency, language use and errors in grammar and spelling by a professional copyeditor. This process takes approximately 1 week.

During typesetting we ensure that links work, citations are formatted correctly, and that the article formatted to a high standard using our template. This process takes approximately 3 weeks.

Once an article is signed off for publication it is produced in the different formats we offer in making our articles freely accessible globally. The article is then published and made live on the journal website. This process takes approximately 1 week.

Once an article is accepted for publication it begins to move through the production stages.

The processed article is then returned to the author for proofreading. Any errors identified are indicated by the author and passed to the journal editor. The time needed for this part of the process is dependent on how long it takes the author to proofread. A nominal period of 1 week is usually allowed for this.
